

# COMPANY PROFILE

ENGINEERING & INNOVATION

# OUR STORY

**2005** ● **CPI-ENG SRL**  
CPI-ENG Srl starts its activity

**2012** ● **MOD ENGINEERING**  
CPI-ENG's operative branch

**2019** ● **CB HOLDING GROUP  
AQC INDUSTRIES**  
Joint venture company 50% Italy - 50% France.  
Focus on AI, Deep Learning and Machine Learning  
application for Automatic Quality Control

**2020** ● **OPENING IN TRIESTE**  
Opening of manufacturing premises in Trieste

**2024** ● **ACQUISITION OF NAVAL DESIGN COMPANY**  
CPI-ENG acquires a company operating in the naval,  
shipbuilding and plant engineering sector

# CPI-ENG AT A GLANCE

**MORE THAN 120**  
ENGINEERS AND TECHNICIANS

**6,5 M/€**  
TURNOVER

**JOINT VENTURE**  
IN PARIS, FRANCE

## 4 BRANCHES

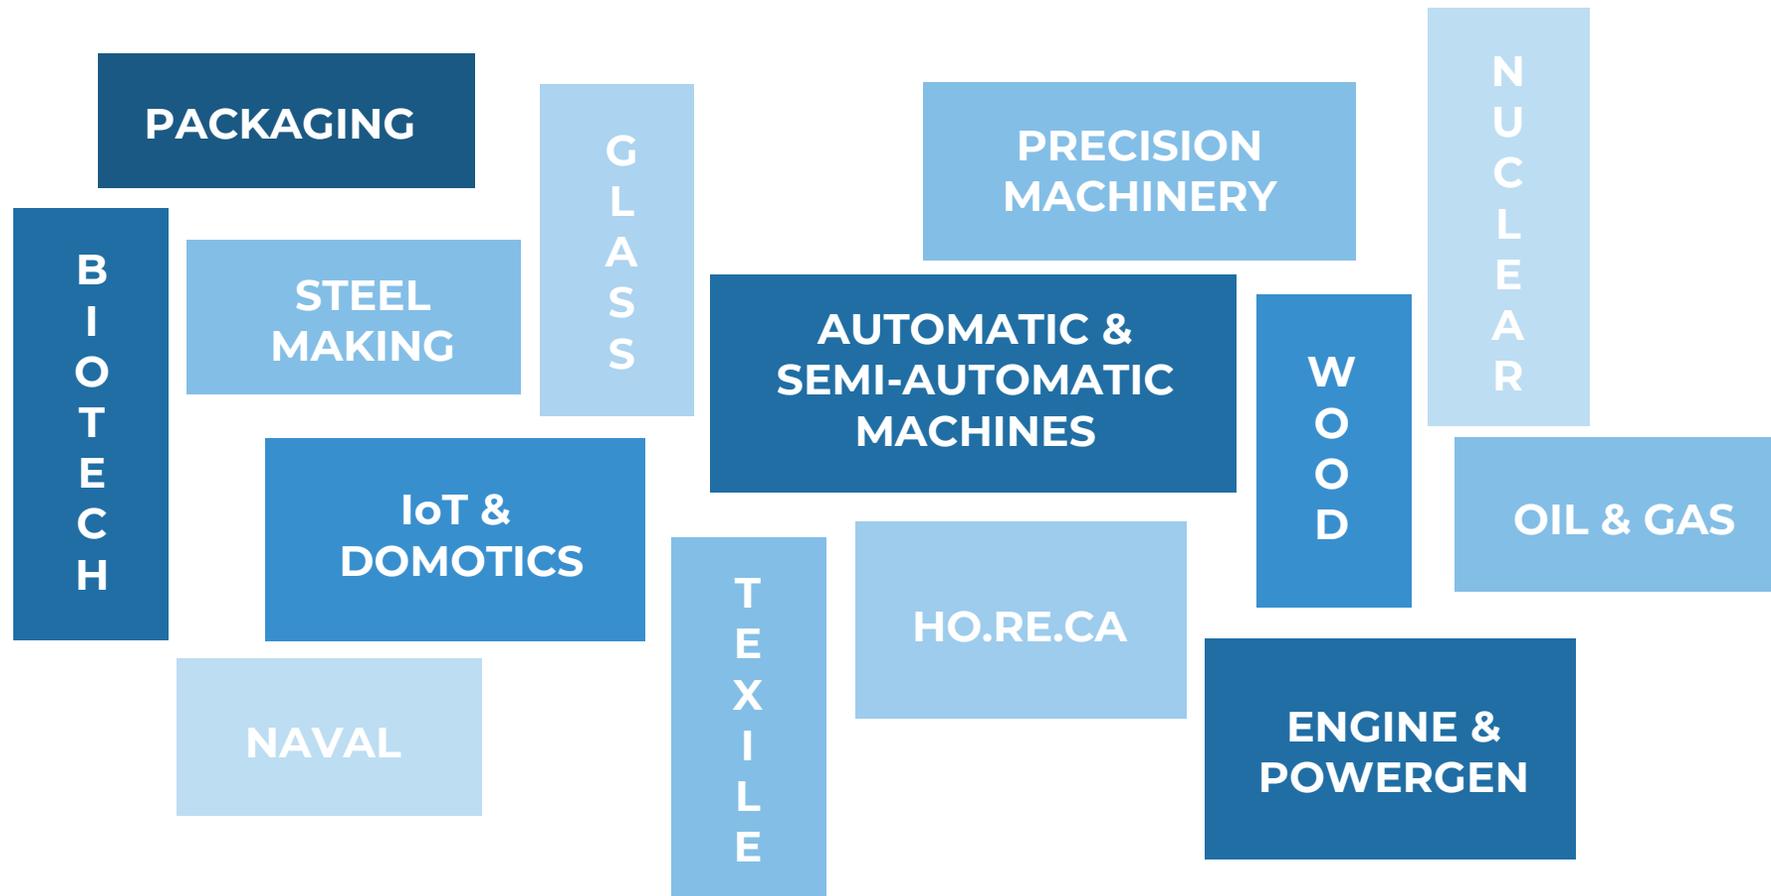

TRIESTE, ITALY  
MUGGIA, ITALY (MANUFACTURING)  
MARGHERA, ITALY  
CHISINAU, MOLDOVA

**MANUFACTURING PLANT**  
600 m<sup>2</sup>

# CPI-ENG BY SECTORS

CPI-ENG MANUFACTURES AND ASSEMBLES MACHINES AND DEVICES IN DIFFERENT INDUSTRIAL SECTORS.

# MECHANICAL

## From REQUEST to SOLUTION

Following your needs (new development, completion of concept, basic/detail design, upgrading, cost down, ...), we can support clients in many kinds of engineering development with our experience in:

- Food engineering
- Biomedical
- Robot/Automation
- Motor engineering
- Macro & Micro mechanical engineering
- Piping engineering
- Structural engineering

For all our designs, we can offer service of validation with calculation and simulations.

# NAVAL DESIGN

- Naval structures
- Naval installations
- Piping systems
- Mooring and outfitting
- Hull classification plans and detailed drawings
- Intact and damage stability booklet
- Equipment and engine plans
- Detailed equipment and engine room coordination plans
- Basic and detailed electrical design
- Noise and vibrations analysis

# ELECTRONICS & FIRMWARE

## NEED-DRIVEN ELECTRONICS

- design and layout of multi-layer PCB boards for both high and low power appliances
- selection of COTS ICs and components for optimum cost/performance

## CUSTOM FIRMWARE DEVELOPMENT

- firmware design, development, and testing for data acquisition and control, based on industry-standard MCUs
- development of real-time control and DSP algorithms in resource-constrained, embedded systems
- design and implementation of the communication architecture both for M2M and IoT-connected systems

Design and optimization of electronics and firmware for compliance with certification standards

# SUPPLY CHAIN & COST ANALYSIS

We can support our customers in the supply chain as far as supplier research is concerned.

We have an increasing network of trusted supplier with whom we develop prototypes and who can follow the project industrialization.

Every project is developed considering costs to deliver the best product in terms of technical performance and reach the target cost.

We can also perform cost reduction improving components engineering or making an analysis on suppliers.

# MODELING, SIMULATION AND DATA SCIENCE

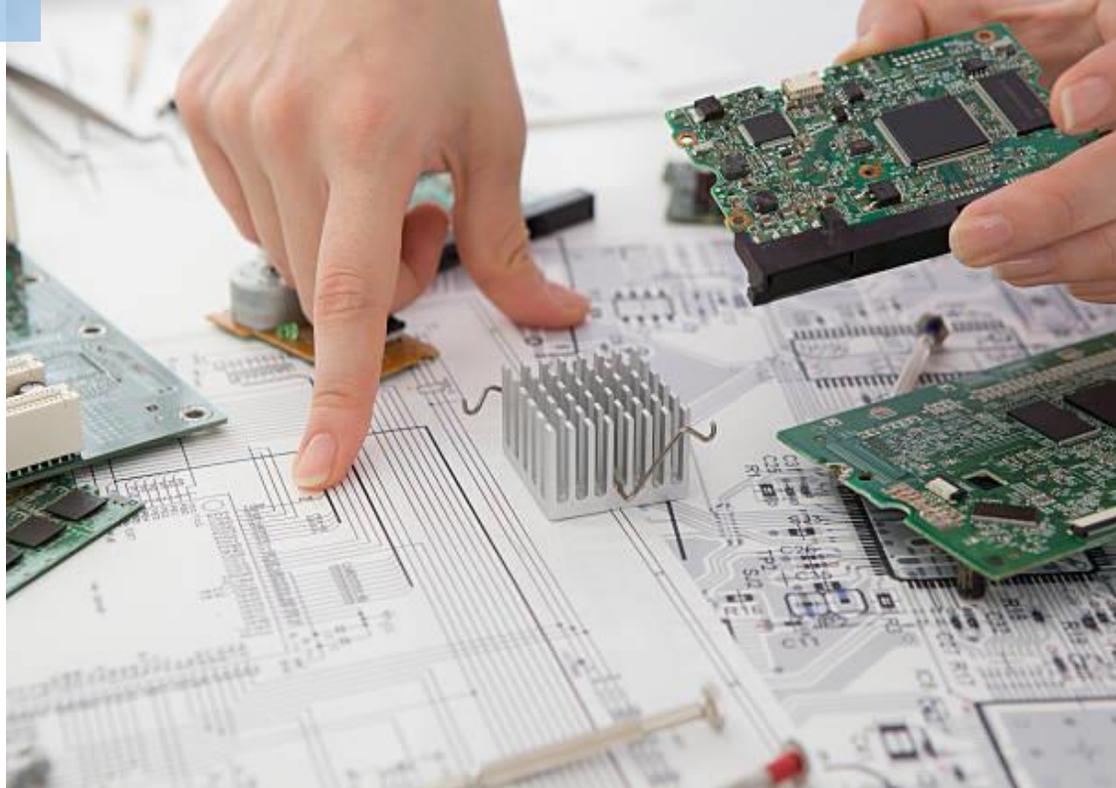

- mathematical modeling and advanced simulation of mechanical, hydraulic and electronic systems
- statistical estimation of states and parameters using Kalman filters
- systems identification for advanced control applications
- development of SISO and MIMO control systems (PID, model predictive control, LQR)
- robust statistical data analysis for experimental model validation, also using machine learning techniques where appropriate

# PROTOTYPING

- development of proof-of-concept prototypes, from electronic boards to complete mechatronic assemblies and devices
- agile iterations on prototype design
- smart adoption of additive manufacturing techniques for cost reduction and flexible design
- depending on customer requirements, prototypes can undergo iterations evolving to pre-series and production-ready devices

# TEST ENGINEERING

- envelopment of dependable test protocols to validate prototype iterations, ensuring precise compliance with customer specifications
- development of complete test benches for testing customer-supplied components or assemblies according to specifications
- broad test categories, including functional testing of electronics and firmware, thermal testing, endurance testing with work cycle simulations, sensor and actuator reliability and accuracy

# SOFTWARE DEVELOPMENT

- development of desktop, embedded, and web-based HMIs for machine control and monitoring
- implementation of high-performance desktop, embedded and cloud algorithms
- setup of *ad-hoc*, state-of-the-art cloud infrastructures for data collection, analysis, machine learning, monitoring and predictive maintenance

# MANUFACTURING & ASSEMBLY

CPI-ENG manufactures and assembles machines and devices in different industrial sectors for OEM.

- creation, qualification and management of the supply chain
- production transfer and optimization of the assembly process
- precision electro-mechanical assembly
- creation of test benches and testing/life-time testing
- post-production support
- ISO 13485 certification in progress

## From project to product

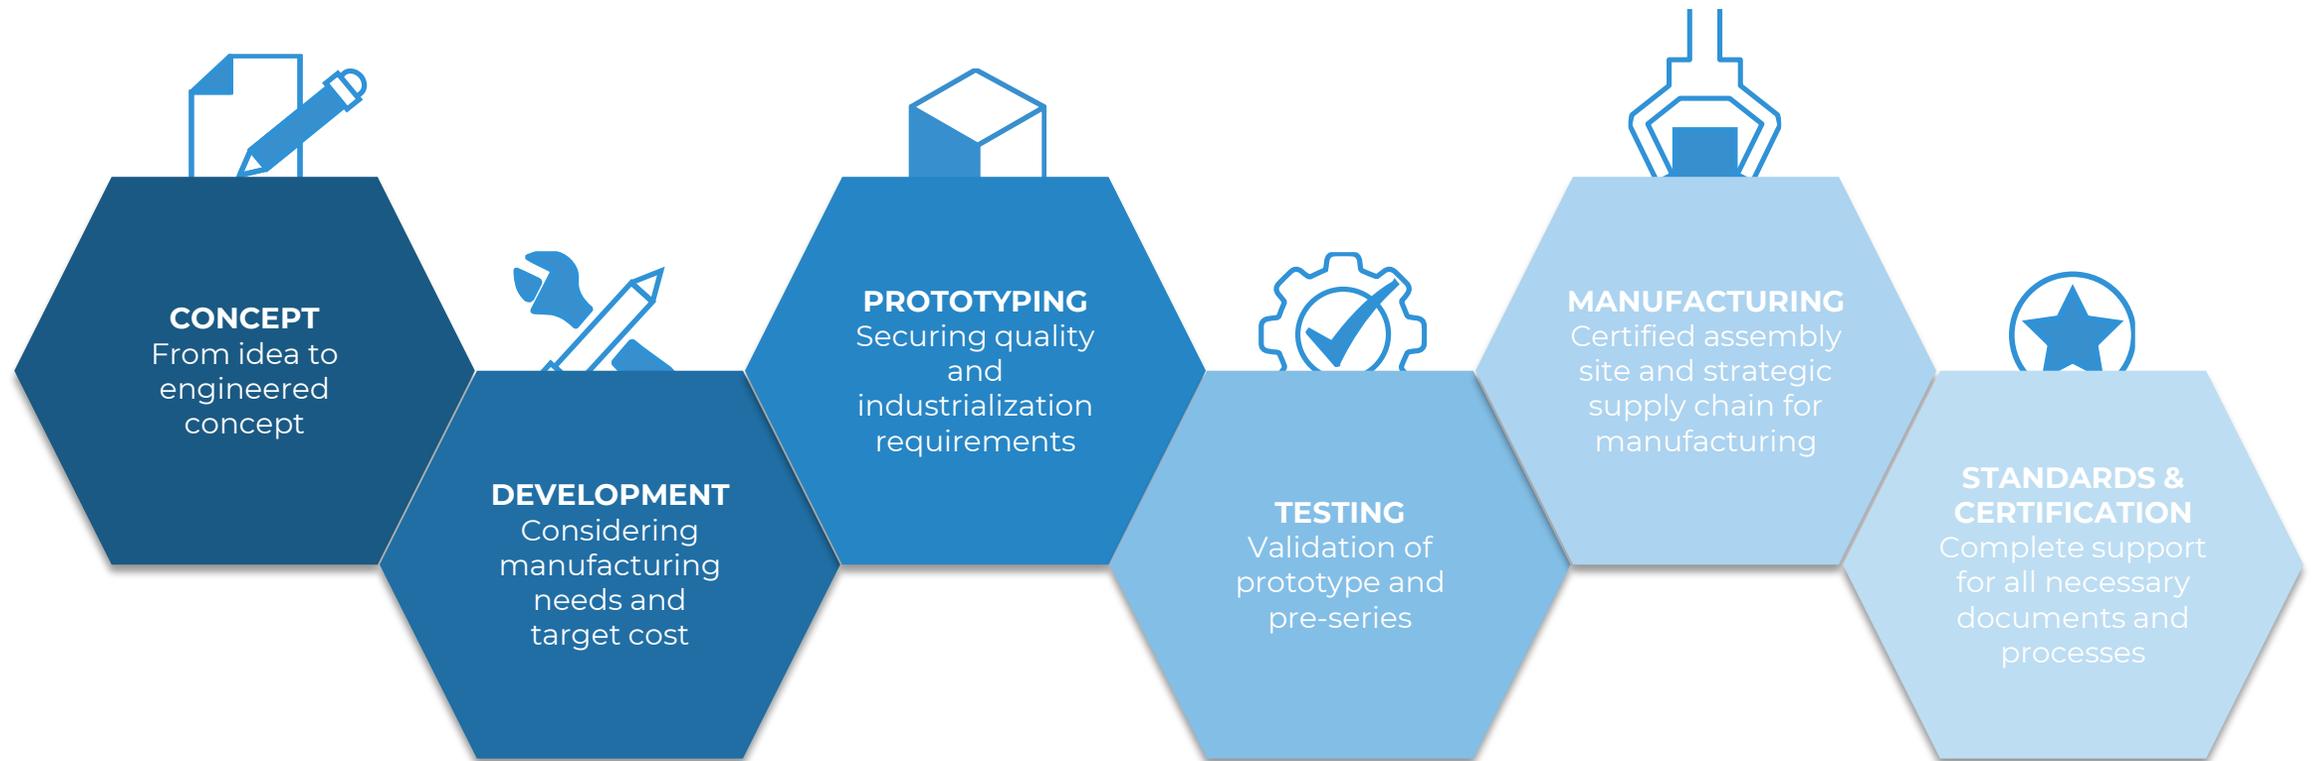

Starting from a development specification, we are able to manage the entire production workflow, from the supply chain to final product validation.

## Contract projects

Starting from the customer's project, thanks to a lean approach and the flexibility of the work and warehouse areas.

# COMPANIES SUPPORT PHASES

CPI- ENG IS ABLE TO SUPPORT ITS CLIENTS AT ALL STAGES BUT ALSO AT INDIVIDUAL STAGES

# SYSTEM INTEGRATION

CPI- ENG GUARANTEES ALL THE SKILLS YOU NEED TO DEVELOP YOUR IDEA WITHIN THE SAME COMPANY.

# OUR TOOLS AND PLATFORMS

SOFTWARE FOR DESIGN AND DEVELOPMENT

CAD	         
PLM	    
Simulation & Analysis	   
Programming languages	     
Database technologies	  
Development platforms	     
Cloud IoT	    
Embedded platforms
