

JOB DESCRIPTION

Manager: Gian Marco Melosu
Department: V&V
Location: Cagliari/Trieste, Italy

Job Title: Validation Engineer

Job Summary

As a Validation Engineer working with our R&D team, you will be responsible for evaluating IoT Wireless Products, analyzing and debugging test results, designing and deploying test plan, designing and developing test case documents and automatic test routines. Important part of the job is to evaluate the products configurations before the production test is sent to factories for production purposes.

Responsibilities

- Execute & analyse Test Sessions delivering detailed Test Reports
- Analyse test results related to Production verification and verify compliance with product specifications
- Maintain, plan, design, develop test scripts aimed to validate IOT cellular wireless products
- Bugs and Change Requests handling in Jira, manage assigned tasks and constantly report on the validation status.

Requirements:

- Bachelor's degree in Computer Science, Engineering, or a related field.
- 2 years' experience in product test development for cellular/wireless technology
- Strong communication skills, problem solving and ability to work in Team.
- Experience with RF/HW automated test and measurement equipments
- Software programming skills (C,Python,VBscripts,Java)
