MARINE INDUSTRY CONSULTING AND DESIGN

SOFTWARE DEVELOPER

We are a design house active in all sea related industries.
We offer market-competitive products and services based on functionality, innovation, elegance and safety. We are bringing the best in style and engineering, offering support to make excellent products in the appropriate way to people, companies and institutions around the world.

We are looking for a passionate, hard-working, and talented Software Development Engineer who has experience in building web-based applications. Being into user experience, caring about applying good design principles to your work, and being able to have real conversations with designers about the trade-offs and balance between functionality, performance, design, and usability, will all be considered pluses.

Position details:
- Full-time position

Job Functions:
- Design and develop new tools to assist nautical designer
- Assist engineers to use digital equipment and process their data (VR, Augmented Reality, laser scanner, 3D printer, thermocamera, vibrometer)
- Working closely with engineering team, designers & product management
- Being part of an innovative tech company research & development team

Minimum Requirements:
- C# experience
- Visual Studio knowledge
- Java experience
- Virtual and Augmented reality experience
- MatLab will be considered a plus
- Team player: You own your work, but have the ability to work with a team
