OVERVIEW: The aim of the Doctoral School in Information Engineering of the University of Trieste is to take care of the education in the fields of the creation, acquisition, management and transfer of scientific knowledge of high level in the area of interest. This, in a viewpoint clearly oriented at the education of a high level figure devoted not only to research activities, but also to innovation and management of research activities outside the academic and public research institutions. Therefore the Ph.D. students have to obtain the ability to analyse the state of the art and identify, suggest, develop scientific innovations and technologies. The cultural area of the School includes Computer Science, Information Engineering, that includes Telecommunication, Automation, Electronics and Bioengineering Science, and the electric part of Industrial Engineering (as Computers and Electrical Drives), as well as two methodological sectors (Numerical Analysis and Operations Research) especially important in applications as Logistics and Digital Signal Processing. Each of these cultural areas shows peculiar connotations for their specificity and offers formative paths so that it is possible, on the one hand to supplement and enlarge the specific skills of every student, promoting individual interesting and talents, on the other hand transfer the state of the art of the specific field of interest, stimulating at the same time experiences and cross-fertilization events to increase and validate the research
